

The Minstead Training Project

A Charitable Trust

Preparing adults with learning disabilities for greater independence

Century IT Services delivered a specification for a new IT & Server System that met our needs exactly.

After having fully understood our needs, which were complex and unclear at the start, they advised us on the best way to configure our new system. They listened to our requirements and delivered a solution which covered our needs and also provided further advice and IT enhancements to assist us in the running of our organisation.

The support given to the Minstead Training Project during the installation and configuration of the IT System was very good and each stage was explained clearly, and all our questions on how to best utilise the new IT facilities were answered clearly both verbally and in writing.

We are very satisfied that our IT System provided by Century IT Services and it actually goes beyond meeting our original requirements, is easy to administer having received excellent training, again provided by Century IT Services. The benefits of the new system are being utilised by staff and students already – a great result!
